Connect housing, classes and transit

M2 Mobility is developing shared transportation for short trips that can be difficult to make between classes or work shifts. A campus can propose a scooter pilot around one connection its students and staff use every day.

A ten-minute trip	At M2's reference fare, a $1 unlock plus 10 minutes at $0.35 per minute would be $4.50. The applicable fare depends on the location and campus agreement.

Start with one trip	Identify a route from housing to an academic building, a dining area or a transit stop. Campus transportation staff, disability services, public safety and student representatives can help choose appropriate riding and parking areas.
Set the operating plan	Agree on parking areas, riding boundaries and how to report a concern. M2 proposes vehicle inspections, rider instructions and a return photo, with room for pedestrians and wheelchair users at entrances and curb ramps.
Review campus impact	Choose what to track together, including trip activity, parking concerns and student feedback. As a program develops, M2 would explore local field and support roles that can accommodate class schedules.

Arrange a campus consultation

Share the campus contact, a trip that students struggle to make and the people who should take part in a site review.

Book a campus conversation **Send a written campus inquiry**
